

## Functional Job Requirements For the Position of Science Teacher Department of Education and Training

This document was developed for the following purposes: assisting in the development of rehabilitation programs for injured or ill employees and to provide detailed information about job demands to medical practitioners and allied health professionals undertaking medical reviews of Departmental employees.

This report identifies those activities which are essential to successful performance in this role. In determining whether a work activity is a “critical activity” the following questions are considered;

1. Does the worker spend greater than 33% of designated work time performing this activity? and / or,
2. Is specialized training/experience required to complete this activity? Has this been completed by only a small proportion of staff in this geographical region? and/or,
3. Is this activity performed in an environment where no other workers are readily available to assist with its completion? and/or,
4. Does this activity occur without prior notice and require immediate attention leaving no time to seek assistance to complete it? and/or,
5. Is this activity core to the development of stakeholder relationships, which are essential to achieving successful outcomes? and/or
6. Would an inability to perform this activity result in an increased health and safety risk to co-workers, students and/or members of the public?

The development process included; site observation of work environments, staff interviews, staff feedback on draft documents and consideration of benchmark publications for the analysis and description of work activities and job demands specific to particular positions (the Revised Handbook for Analysing Jobs, the Occupational Information Network and the Australian Job Guide, 2006).

This report indicates the average time spent across a working week on each work activity and also on each physical demand of work. In order to make this information meaningful to the various users of this report, in some instances the time spent is expressed as a single word, as a percentage of total time or as an actual amount of time (i.e. hours and minutes). The timeframes used are based on the benchmark descriptions (from the publications above) for expressing frequency of performance of work tasks.

Descriptor	Percentage of Time	Amount of Time based on 25 hours per week
Not present	0%	0 mins
Rare	1%-7%	15 mins – 1 hour 15 mins
Occasional	8%-33%	1 hour 30 mins – 8 hours 15 mins
Frequent	34%-66%	8 hours 30 mins – 16 hours 30 mins
Constant	67%-100%	16 hours 45 mins – 25 hours

### **Description of the Science Teacher:**

It is the role of a Science Teacher to teach a class of up to 28 students in years eight to twelve. Junior classes (years 8-10) will have up to 28 students per class and senior classes (years 11 and 12) will have up to 25. Students in high schools will generally be aged 13 years and above. Science Teachers are responsible for all aspects of the planning, preparation and delivery of effective learning and teaching programs across a range of science subjects including Biology, Chemistry and Physics. Junior science classes (years 8-10) are generally a mix of all three sciences, whereas senior classes (years 11 & 12) elect to complete one or all of the sciences and focus specifically on the one area. Science Teachers spend approximately half of their lessons teaching theory and the other half doing practical experiments and demonstrations. The curriculum is spread across four terms per school year and is determined prior to the start of the new school year. The average time spent by Science Teachers in classes will be 20 hours per week (for example 17 classes of 70 minute duration)

## Functional Job Requirements For the Position of Science Teacher

### **Assessment Details:**

Assessment of the Science Teacher position was conducted at Yeronga State High School (Villa Rd, Yeronga) which had four exclusive Science teachers and four Science / Physical Education combination teachers at time of assessment. Primary contact was Mr Paul Symoniw, who provided most information at time of assessment. Depending on the school, Science teachers may work in a range of subjects, usually Mathematics or Physical Education.

### **Hours of Work:**

The ordinary hours of work for a Science Teacher is 25 rostered hours per week. The average class time is 20 hours per week subject to a number of variables including number of classes taught (Refer to Teachers Award State 6.5.3). Science Teachers do not have set uniform requirements however they are required to wear clothing and shoes suitable to teaching practical experiments. Science Teachers are required to utilise PPE during some experiments including vision protection, and aprons, and they are required to ensure all students utilise PPE and safety equipment at required times.

The ordinary spread of hours of work exclusive of meal times is between 8.30am and 3.30pm Monday to Friday. High school will vary in terms of how the school day is scheduled e.g. Yeronga State High School has four seventy minute sessions per day. Alternate hours can be worked between 7.00am and 5.00pm Monday to Friday and it is generally expected that Science Teachers will participate in relevant school related activities prior to set working hours.

### **Meal Breaks:**

Science Teachers are entitled to a meal break of 40 minutes unpaid if in excess of 5 hours is worked on any day, to be taken between 11.30am and 2pm or such other times as may be arranged by the Principal. Science Teacher's assessed reported general daily meal breaks consist of a 40 minute lunch taken first and a 20 minute afternoon tea. It was further reported that organisational demands and scheduled playground supervision may inhibit taking of such breaks.

### **Rest Pauses:**

Science Teachers are entitled to a rest pause of 10 minutes duration to be taken mid-morning which will be considered as rostered duty time. It was reported that organisational demands may inhibit taking of such breaks.

### **Bus and Playground Supervision:**

Science Teachers are required to undertake bus and playground supervision duties twice per week (generally one morning tea and one lunch session).

### **Non-Contact Time:**

Science Teachers will usually have three 'spare' sessions per week in which to complete non contact duties such as session planning, marking, liaising with parents, however this number will vary depending on other duties they fulfil.

## Functional Job Requirements For the Position of Science Teacher

### **Activity Frequencies:**

The Activity Frequencies below have been calculated based on a week of 5 days comprising 5 contact hours per day, as per page one of this report.

### **Critical Job Demand:**

Job activities have been listed as critical only where they meet criteria for critical job demands, as outlined on page one of this report.

	<b>Job Activity</b>	<b>Average Time</b>	<b>Critical Job Demand</b>
1	<p><u>Room / Activity set-up</u> Science teachers are required to set up a class room when they will be completing a demonstration to a class of students or the students will be participating in a practical teaching session. The teacher aide and students may assist with this process. This may include setting up experiments (including chemicals, glassware, bunsen burners, other equipment and PPE for students). It is noted that science teachers may perform the room / activity set-up either just prior to the class, or the day before dependent upon if the experiment will take a long period of time to set-up i.e. measuring out quantities of chemicals, moving bags of soil and pots for biology classes.</p>	<p>Occasional: Up to 7 hours per week</p>	Yes
2	<p><u>Teaching of Students</u> Science involves teaching a variety of subjects in the field of science, based around Chemistry, Physics and Biology. The subject being taught and the experience of the teacher will determine what classes each staff member will take. Generally, staff with a university degree in science are able to teach senior Science classes, whereas staff with a general Education degree take junior Science classes.</p> <p>Depending on the class, a proportion of the curriculum is taught in a classroom environment encompassing the theoretical background material prior to completion of a practical component. Generally 50% of classes are theory in nature, with the other 50% involving practical demonstrations and experiments. Experiments may be short in nature, lasting only one lesson e.g. chemistry experiments of mixing chemicals, or take place over a whole term e.g. a Biology experiment growing plants or seeds.</p> <p>Subjects are usually taught in specifically identified rooms within the school with access to appropriate equipment and supplies. Generally Science subjects are taught in laboratories, to enable access to gas supply, water and chemicals. Teaching may involve standing or seated presentation of information to students, monitoring verbal and non-verbal responses of students to information, providing answers to questions, supervision of group and individual learning activities and encouraging participation by students.</p>	<p>Constant Up to 25 hours per week  (e.g. 1-2 hours per week )</p>	Yes
3	<p><u>Parent Liaison</u> Teachers may contact the parents of their students via telephone as required to discuss specific issues (e.g. student performance). Science teachers participate in teacher parent interview nights approximately three times per year and staff may also be involved in subject information nights providing additional information as needed to both students and parents.</p>	<p>Rare: Up to one hour per week</p>	Yes

## Functional Job Requirements For the Position of Science Teacher

### **Activity Frequencies:**

The Activity Frequencies below have been calculated based on a week of 5 days comprising 5 contact hours per day, as per page one of this report.

### **Critical Job Demand:**

Job activities have been listed as critical only where they meet criteria for critical job demands, as outlined on page one of this report.

	<b>Job Activity</b>	<b>Average Time</b>	<b>Critical Job Demand</b>
5	<u>Specific non-contact time</u> Involving session planning, completion of administrative paperwork, correction of students' work, reports, class preparation (e.g. photocopying, resource preparation) review of resources, purchasing of supplies, checking and responding to messages etc. It was noted that teachers may spend additional time outside of their standard hours completing these tasks (e.g. an additional 5-8 hours per week).	Occasional: Up to 3.5 hours per week	Yes
6	<u>Trialing Experiments / Risk Assessments</u> Science Teachers are required to conduct trials of any experiments that they conduct in a classroom with students prior to actually teaching the lesson. This may occur if the experiment is new or if materials change in order to determine the accuracy of the experiment, quantities of required materials and to identify any safety issues. Science Teachers are also required to conduct a thorough formalised Risk Assessment of all experiments and practical lessons which outlines any safety issues for students, and how the staff member plans to manage any risks. It is noted that staff may be required to complete trial experiments and risk assessments outside of set working hours due to time demands.	Occasional: Up to 2 hours per week  (e.g. One trial experiment per week)	Yes
7	<u>Student Supervision</u> Science Teachers are required to participate in two supervision sessions per week, usually consisting of one morning tea and one lunch break. Supervision can include the playground, gym, library and bus areas (depending on the school) and involves ambulating around a pre-determined area and completing visual and auditory monitoring of students' activities and school premises, providing assistance to students as required.	Occasional: Up to 1 hour 30 mins per week	Yes
8	<u>Staff Meetings</u> Science Teachers are required to participate in both general and department meetings as per school requirements. At the school where assessment was conducted, Science Teachers reported they participated in at least one meeting per week. Length of meetings will generally be between 30 and 60 minutes, before or after normal school hours, however may be longer if a whole school meeting is required.	Rare: Up to 1 hour per week	Yes
9	<u>Committee Meetings:</u> Science Teachers may also be required to, or choose to, participate in certain school based committees (for example student council, P&C, sound and lighting) Most committee based tasks are voluntary in nature and level and type of participation will vary depending on the committee in question.	Rare: Up to 1 hour per week	No

## Functional Job Requirements For the Position of Science Teacher

Frequency of Physical Job Demands (Average % of Shift)											
Demands	Not Present	Rare (0-7%)	Occasional (8-33%)	Frequent (34-66%)	Constant (67-100%)	Demands	Not Present	Rare (0-7%)	Occasional (8-33%)	Frequent (34-66%)	Constant (67-100%)
Sitting			√			Reaching				√	
Standing - Static			√			Handling					√
Standing - Dynamic					√	Pushing			√		
Walking - Flat Terrain				√		Pulling			√		
Walking - Slippery/ Gravel Terrain			√			Lifting			√		
Climbing - Step Stools/Ladders		√				Carrying				√	
Climbing - Stairs		√				Balancing - Above Ground			√		
Stooping			√			Fine Motor					√
Kneeling		√				Control Operation			√		
Crouching - One Off			√			Arm- Hand Steadiness			√		
Crawling		√				Driving		√			
Auditory Function					√	Visual Function					√

Tools / Equipment Handled
Scientific equipment and materials: microscopes, Bunsen burners, chemical bottles, tongs, magnets, voltmeters.
Students' chairs and desks- up to approximately 20kg
Pens/ pencils/ chalk/ whiteboard markers, books and activity equipment
Computers, PDAs and data projectors
Phone and email - for planning / liaison with different schools and staff.
Learning Aides– overhead projectors, screens, computers

Loads Lifted & Carried					
	Not Present	Rare (0-7%)	Occasional (8-33%)	Frequent (34-66%)	Constant (67-100%)
<b>0-5 kg</b>				Floor to Waist to Shoulder: E.g. Glassware, chemicals	
<b>6-10kg</b>			Floor to waist to shoulder E.g. Microscopes, voltmeters		
<b>11-15kg</b>					
<b>16-20kg</b>		Floor to waist E.g. moving tables, bags of sand.			

## Functional Job Requirements For the Position of Science Teacher

### Risk Based Physical Environmental Considerations:

- There may be clutter in the work/storage area, increasing the risk of trip hazards, awkward bending and lifting, and poor storage practices
- Items, furniture and fixtures may have limited adjustability features requiring the adoption of awkward postures
- There may be limited space for movement during performance of some activities
- There may be constant low-level ambient noise (from students and potentially traffic)
- There may be limited classroom lighting and ventilation in some facilities
- Some work may be performed outdoors or in an area exposed to the elements (e.g. experiments on school ovals or on excursions)
- Terrain during community outings is variable e.g. parks, rivers for study of ecosystems
- Work may be performed in temperatures above 24 degrees (occasionally in summer)
- Work areas may be slippery or wet
- There is exposure to chemicals

<b>Psychosocial Risks to be Considered</b>	<b>Social / Interpersonal Demands</b>	
Time pressure/high workload- while deadlines exist for many tasks, the level of demand is dependent upon school environment and staffing level. The teachers workload can be high due to multiple demands and a large number of unplanned interruptions occurring throughout the day.	Performing for or Working Directly with the Public – parents and students	Coordinating or Leading Others - students
Responsible for others' health and safety: provide appropriate instruction and supervision of students when using equipment / materials (chemicals, scalpel, bunsen burner) and ensure appropriate PPE is worn and safety procedures are followed along with regular first aid treatment for major or minor accidents/injuries	Communicating with Persons Outside the Organisation - parents and community members	Coaching and Developing Others - aides and students
Environmental Stress– constant low level ambient noise from students, PA announcements, school bells etc requiring considerable projection of voice to be heard. Some temperature variation during winter and summer, constant environmental monitoring of student location during outdoor experiments.	Establishing and Maintaining Interpersonal Relationships - with students, staff and parents	Coordinating the Work of Others - aides and students
Insufficient work breaks- shortened breaks may be taken on a voluntary basis due to high workload and time constraints. Breaks may be limited by meal and playground supervision duties, particularly if there is insufficient planning e.g. unplanned wet weather duties.	Resolving Conflicts - between students and Negotiating with Others - students/parents/ staff	Interpreting the Meaning of Information for Others - students
Investigations - participate in reporting, investigation and resolution processes, including mandatory reporting of suspected child abuse or neglect and participation as a witness or party to performance, discipline, grievance, WorkCover or other processes.	Communicating with Supervisors, Peers, or Subordinates	Dealing With Unpleasant or Angry People - parents (potentially)
Policies - comply with departmental policies, procedures, guidelines and the code of conduct, including undertaking risk management processes to ensure the health and safety of students and others under their supervision or direction.	Guiding, Directing, and Motivating - students	Dealing With Physically Aggressive People - students and parents
	Training and Teaching - students	Assisting and Caring for Others - students (may include first aid)

## Functional Job Requirements For the Position of Science Teacher

### Considerations for Assessment of Physical Job Fitness:

- Assessment of sustained standing capacity of 30 minutes including sufficient flexibility to allow adoption of awkward postures when working with students
- Ability to sustain constant dynamic standing throughout the day with minimal sitting breaks
- Capacity for grip patterns required for repetitive handling of scientific equipment.
- Assessment of fine motor dexterity or actual keyboard operation for typing activities (for non contact duties)
- Ability to lift and carry heavy and/or awkward loads with no assistance (up to 20kg)
- Symmetry, range and discomfort with movements of the spinal and peripheral joints, including hips, knees, ankles, shoulders and wrists
- Able to ascend and descend 2 x flights of stairs
- Sufficient visual and auditory function to enable interaction and response to students

### Other Considerations

- History of neck/shoulder discomfort associated with static and sustained repetitive neck flexion postures
- History of upper limb, lower limb or spinal pain with repetitious or static tasks
- History of lower back pain with sustained sitting or standing
- Knowledge of individual allergies and ability to work with a wide range chemicals
- Knowledge of ergonomic principles for clerical workstations and knowledge of / ability to learn safe crouching/stooping posture (with flexion occurring at the hips rather than in the lumbar spine)
- Knowledge of correct manual handling techniques i.e. ability to bend at hips, bend knees and squat with a neutral spine
- Knowledge of vocal health and techniques to enable safe projection of voice
