Asbestos Management — Your role

No WAAP, no work, no way!
• BEMIR Work Area Access Permits (WAAPs) are a “permit to work”.
• Service providers must have a current WAAP before any building related work starts at the facility.

Clear out before building related work begins
• No students or staff are to be in the area or room while building related work is underway.
• Asbestos removal work must take place outside of operational hours.

Be asbestos aware, act with care
• Only external service providers are to undertake building related work with assumed or confirmed asbestos-containing material.
• Departmental staff are not to undertake building related work with assumed or confirmed asbestos-containing material.
• Know your asbestos management team and report any damage, incidents or concerns.

Let the professionals take care of the clean
• External service providers are responsible for cleaning up after their own building related work.
• Where an asbestos incident (including accidental damage) has occurred, Building Asset Services (BAS) or their nominated contractor must undertake the repairs and clean.
