

# Personal Protective Equipment the last line of defence

Some hazards can't be eliminated or reduced by other risk controls.

## Personal protective equipment:

-  **Wear it** in conjunction with other safety control measures
-  **Check it** to make sure it fits properly and comfortably
-  **Replace it** if it gets damaged or stops providing protection

If you fail to wear the correct eye protection, this could lead to eyesight issues

Don't be  
a statistic.
